Sequence 22, Application US/09331347C

Patent No. 6617431

Sequence 22, Application US/09331347C

Patent No. 6617431

APPLICANT: Meristem Therapeutics, S.A.

APPLICANT: Meristem Therapeutics, S.A.

TITLE OF INVENTION: Detaining Such and Their Uses

TITLE OF INVENTION: Obtaining Such and Their Uses

FILE REFERENCE: 1149-3

CURRENT APPLICATION NUMBER: US/09/331,347C

CURRENT PILLIG DATE: 1999-08-17

NUMBER OF SEC ID NOS: 22

SOFTWARE: Patentin version 3.1

SEC ID NO 22

SOFTWARE: Patentin version 3.1

CORRENTSM: HOO SEC ID NOS: 22

SOFTWARE: Patentin version 3.1

Sequence 215, Application US/09404879A

Patent No. 6468546

GENERAL INFORMATION:

APPLICANT: Mitchan, Jennifer L.

APPLICANT: King, Gordon E.

APPLICANT: Algate, Paul A.

ITILE OF INVENTION: COMPOSITIONS AND METHODS FOR THE THERAPY AND TITLE OF INVENTION: DIAGNOSIS OF OVARIAN CANCER

FILE REPERENCE: 210121.462C2

CURRENT APPLICATION NUMBER: US/09/404,879A

CURRENT PILING DATE: 1999-09-24

NUMBER OF SEQ ID NOS: 393

SOUTHARE: FRAISEQ for Windows Version 3.0

SEQ ID NO 215

LENGTH: 590
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö

9144.835 Million cell updates/sec

    No. is the number of results predicted by chance to have a
re greater than or equal to the score of the result being printed,
is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Description
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence

GENERAL INFORMATION:
GENERAL INFORMATION:
TITLE OF INVENTION: Methods and composition for producing secreted trimeric
TITLE OF INVENTION: receptor analogs and biologically active fusion proteins
FILE REFERENCE: 03-052-PL
CURRENT APPLICATION UNDERE: US/10/677,877A
CURRENT RILING DATE: 2003-10-02
NUMBER OF SEQ ID NOS: 16
SEQ ID NO 5
